"As wealth among the Yacoutes consists in numerous flocks, from this circumstance it follows that they take care to live dispersed in small groups of two or three yourtes, so as to have at hand sufficient pasturages. A certain number of these little villages form a notchlegh, administered by a kniazetz or small prince. Several notchelghi compose an oulouse, which is governed by a golova; these different functions are elective. The inhabitants of a notchlegh call themselves tjonobout, or of the same kind. When they make an election, each elector depostis his vote in a box divided in as many compartments as there are candidates; then the votes are counted, and the candidate who has obtained the largest number is proclaimed. Besides, it is always in the power of the governed to depose the chief with whom they are dissatisfied, in order to proceed to a new election. The district of Yakoutsk contains six oulouses, with a population of about 40, 000: there are, besides about 30, 000 Yacoutes settled in the government of Yeninseisk and in other parts of Siberia."

"Including the Dolgans, they are computed at 226,739, of whom 113,330 are males. Their marriages are fertile, with an average of about ten to a family, but less productive as one goes north. They are increasing in numbers and absorb a large number of Russian settlers, who learn their language and adopt their customs."

39: Jochelson E-5 (1888-97) 1906 Yakut

tribes, — such as the Gilyak, Kamchadal, Koryak, Chukchee, and Yukaghir, — which were studied by the Jesup North Pacific Expedition, were found to have a culture identical in many respects with that of the North American tribes. The Yakut, however, though at present living in the extreme northeast of Siberia, are a typical representative of the culture of the nomadic horse and cattle breeding Turkish tribes of Central Asia. In spite of their present isolation from the other branches of the Turkish race, and their probable mixture with Mongols, Tungus, and others, the Yakut, in the course of their migrations, have preserved one of the oldest and purest dialects of the language spoken by the Kirghis, the Altaic tribes, the Siberian and European Tartars, and other Turkish peoples. In tracing the meaning of some Yakut words, I am indebted to my friend Mr. Edward Pekarski, the well-known authority on the Yakut language, for his assistance.

While none of the other tribes of the extreme northeast of Asia are numerous, — each being composed of but a few thousands or even hundreds, and those often spread over large districts, — the Yakut, next to the Buryat (of whom there are about two hundred and seventy thousand), are the most numerous tribe of eastern Siberia, numbering some two hundred and fifty thousand. Regardless of the unfavorable conditions of life in their present territory, they are increasing numerically, and are showing capacity for higher material culture and intellectual progress.

According to some indications, the Yakut were separated from the other Turkish tribes of the steppes of central Asia and southern Siberia, and driven to the northeast by the Mongol hordes, at the time of the invasion of the conqueror Chinghis Khan. By the valley of Lena River they reached the country of their present abode, in their turn driving farther to the north and to the mountains, or assimilating, the ancient residents of the country, — the Tungus and Yukaghir. The Yakut brought to the far northeast of Siberia, not only their Turkish language, but also the whole of the comparatively high culture of Central-Asiatic horsemen, brought with them horses and cattle, introduced silver, iron, and copper work, the fashion in

/182 cont./

114 Olenék, near the mouth, he found the sunken graves overgrown with moss and lichens; only a weathered wooden cross with a barely legible inscription recalls the hero to mind. Perhaps an age that has again turned its interest to a significant degree to the navigation of the Arctic Ocean will set up a worthy monument for this deserving champion at the place where he ended his heroic career.

175 At that time Russian peasants probably lived
178 here; perhaps the present inhabitants are in part descendants
[651] of the many crews that came here with those bold commanders; they still call themselves krestjáne, i.e., peasants, and their crown tax seems to be standardized accordingly, differing from that of the other Jakuten /Yakut/; in everything else they are completely Jakutized and any reminder of former times has
[829] disappeared. But they complain that they are becoming ever
[162] fewer, not, say, because of especially devastating sicknesses, but because only daughters are preponderantly born to them. I do not know whether this phenomenon also occurs among other ichthyophagists. But that is what they are in the truest sense of the word.

226 During the greater part of the year they feed themselves and
262 their dogs almost exclusively on fish. Mukssún and o'mul of
231 considerable size are the principal fish, also taiméne /taimen/ and néljma, for which, however, this was not the proper season, and therefore, instead of the anticipated delicacy, we had
226 to be content with the former, less prized fish. Otherwise only a few smaller kinds of fish are found here, but no sturgeon or sterlet, although these, as we /183/ learned on the journey, are caught, even though rarely, much farther upstream in the region of the Ssiligír. Fishing is also productive in the tundra lakes; in particular two kinds present there were brought to us, the ihüll and the mungnúr, the latter a very tasty fish that is also quite common in the Olenék itself, where from the Ssiligír

THE YAKUTS

S. A. TOKAREV and I. S. GURVICH

The Yakuts are the basic population of the Yakut ASSR, territorially one of the largest Republics in the Soviet Union. The name of this people was taken by the Russians from the Tungus, who called them Jeko. The Yakuts call themselves Sakha, and in the ancient legends they are known as Urangkhay Sakha.

General Information

By language, the Yakuts belong to the Turkic-speaking group of peoples (the northeastern branch), although the language occupies a somewhat isolated position in this group. In the vocabulary and, to some extent, in the grammar of the Yakut language, there are many Mongol elements as well as others of Tungus and of unknown origin.

The total number of Yakuts according to the 1926 census was 235,926 persons, including 122,245 men and 113,681 women. The urban population was 4936 persons and the rural population 230,990. There were 235,523 persons speaking their own (Yakut) language. Statistics for the same year tell us that the Yakuts made up 82.3% of the total population of the Republic, the remainder being 10.4% Russians, 4% Evenks and Lamuts, 0.5% Chukchi and 0.14% Yukagirs.

The principal territory occupied by the Yakuts is the basin of the Middle Lena with the Lower Aldan and Vilyuy. There are also Yakuts living close to the mouth of the Olekma River along the rivers Yana, Indigirka, Kolyma, Olenek and Anabar. Almost the whole of this region is located in the East Siberian taiga belt, which consists partly of mountains and partly of lowlands (the Vilyuy depression). In the Far North, along the Arctic coast, there stretches a wide belt of forestless tundra, 300 km long. The general landscape is a gentle slope from south to north, intersected in different directions by mountain ranges (Verkhoyansk, Cherskiy and so on). The territory is rich in mineral deposits (coal, iron, diamonds, gold, silver, lead ore, platinum, salt, semiprecious stones and so on), but before the Revolution was hardly touched at all. Apart from an extensive network of rivers, Yakutiya has a large number of small lakes. Many of them have been drying up in recent years. The banks of the lakes and rivers as well as the numerous meadows (alaas'y) within the taiga, constitute the cultural oases. The climate is a dry one, severely continental, with fierce frosts throughout the long winter (the cold pole occurs in the upper reaches of the Indigirka, near the village of Oymyakon) with a brief, though hot summer (except for the Far North and the mountainous regions). The soils are saline and fairly fertile. There is a layer of

53:Tokarev and Gurvich E-4 (no date) 1964
RV2 Yakut RV2

permafrost at a depth of one or two meters, but it does not prevent plant life. The taiga flora consists predominantly of larch, as well as some birch and pine. The animal world is rich and varied, containing squirrel, Siberian ferret, ermine, hare, fox, bear, wolverine, elk, blue fox, wild reindeer, musk deer, etc.; the species of birds are numerous and in the lakes and rivers there is an abundance of carp, different types of salmon, sturgeon, and so on.

The distribution of Yakuts throughout the territory of the Republic is extremely uneven. About nine-tenths of them are concentrated in the central regions—in the former Yakutskiy and Vilyuyskiy Okrugs. These are the two principal groups of Yakuts, the first being slightly larger in number than the second. The "Yakutiyan" (or Amga-Lena) Yakuts occupy a rectangle between the Lena, Lower Aldan and Amga, the taiga plateau, and also the adjoining left bank of the Lena. The "Vilyuy" Yakuts occupy the Vilyuy Basin. It is among these basic Yakut regions that the most typical, purely Yakut way of life has developed; it is here that it has been studied most thoroughly, particularly on the Amga-Lena plateau. The third, considerably smaller group of Yakuts is to be found in the region of Olekminsk. The Yakuts of this group are more Russified, and their way of life (though not their language) has become closer to the Russian. And, finally the last group, the smallest but most widely spread, is the population of the northern regions of Yakutiya, the basins of the Kolyma, Indigirka, Yana, Olenek and Anabar Rivers.

The northern Yakuts are distinguished by a completely original cultural way of life: in this respect they are closer to the smaller hunting-fishing peoples of the North, the Tungus and Yukagirs, than their southern fellow tribesmen. These northern Yakuts are even, here and there, known as Tungus (for example, on the upper reaches of the Olenek and Anabar), although in language they are Yakuts and call themselves Sakha.

In language the Yakuts are monolithic. There are no dialects, there are only slight regional differences; for example, in the southern part, the Amga-Lena plateau, there is akan'ye [pronunciation of an unstressed "o" as "a"] and in the north and on the Vilyuy there is okan'ye [pronunciation of the unstressed "o" as "o"].

The earliest history of the Yakut district has become known only during the last few years through archeological research, chiefly through the efforts of A. P. Okladnikov. Paleolithic campsites have been found on the Upper and Middle Lena. During the Neolithic man already inhabited the entire course of the Lena, probably together with its tributaries and other Yakutiyan rivers. The neolithic tribes led the seminomadic life of hunters and fishermen. Even then there were signs of economic and cultural ties between the population of the Lena district and the more southern, easterly and western regions of Siberia. These ties became stronger during the Bronze Age. It was even recently widely believed in science that the population of Yakutiya was itself never able to work bronze, and that it obtained bronze objects from the Baykal regions and the Upper Yenisey. It has now been proved (by Okladnikov) that bronze was worked in Yakutiya itself, and, moreover, that the population carried on lively exchange with the tribes of southern Siberia, from whom they first learned about bronze.

Were these ancient tribes of the Lena district the ancestors of the present-day Yakuts? The problem of the origin of the Yakut people is one of the most complicated ones in the history of the Siberian peoples. It has a long history of its own, in fact. But until recently the solution was sought in an entirely different way; it was assumed that in origin the Yakuts were
